William Sellers & Co., Incorporated.

Philadelphia May 25, 1888

Hon. D.M. Fox,

Supt. U.S.Mint,

Philadelphia.

Dear Sir:

Our attention having been called by your Mr Saml. James to the difficulties which you have been experiencing with one of the bearings on the line of 4" shafting in the North passage, we are now making a new Hanger-box, to take the place of the one giving trouble. As the bearing in question is subject to heavy strains, owing to its resisting the pull of two large belts, both exerting their force in the same direction, we are making the new box with more wearing surface than the old one, and we are making special provision for the lubricating. To use this bearing successfully it will be necessary to use continuously and freely a good fluid oil. By catching the oil---after leaving the bearing---and filtering and cleaning it, the same oil can be used frequently with but little waste, and thus secure a reliable system of lubrication at a very low expense. As this box can only be erected when the line of shafting is standing, we propose to do it on

Fox,2.

Wednesday next, 30th inst., which being "Decoration Day" is generally observed as a holiday. Will you please inform us if it will be satisfactory to you to have the work done at that time and oblige

Yours truly,

Wm. Sellers & Co. Incorporated,

Edward Sellers
